

## Frais de port B2C

The hex head screw DIN 933 stands out with its wide six-sided head, allowing optimal tightening torque with a simple wrench or socket. Fully threaded, it ensures optimal and uniform fastening, suitable for all types of assemblies. Made of plastic, this screw combines strength, lightness, and electrical insulation. Its smooth surface and refined design make it a preferred choice for sensitive environments where its characteristics provide real added value. It is a widely used standard among both individuals and professionals.
